

New Fully Welded Vahterus PSHE Multi-Condenser

Vahterus has 30 years of experience in providing leading heat transfer solutions to the refrigeration industry.

This autumn Vahterus is pleased to introduce the PSHE Multi-Condenser, a new model of ammonia condenser developed for the growing heat-pump market.

Vahterus PSHE Multi-Condenser improves the heat pump system COP (Coefficient of performance), desuperheating, condensating and subcooling the ammonia in a single unit.

The new product offers increased safety and a service-free future for the customer. The fully welded plate construction has no gaskets that require service or create possible leakage risk for the surrounding environment.

The installed heat-pump capacity of Vahterus condensers is over 1000MW. The new Vahterus PSHE Multi-Condenser will make it possible to get even more capacity and higher system COP in the coming years.

You can learn more about the new product at our live-stream launch on **Thursday 26 November 2020**, held on our LinkedIn page.
