

Vahterus Seeks New Avenues for Local Manufacturing in The USA

2023 was a record year in sales for Vahterus and the Group's turnover grew 38% globally.

As a key part of the Group's global growth strategy, Vahterus is currently exploring new avenues for local manufacturing to enhance its expansion plans in the USA and worldwide. 'In order to strengthen our presence and accommodate our growing market demands, we've temporarily stopped our manufacturing operations at Vahterus Manufacturing Inc. in Irwin, Pennsylvania' says **Mauri Kontu**, CEO and owner of the Vahterus Group. During this transition, all heat exchangers destined for the USA market will be made in Finland, ensuring the highest quality and reliability for our customers.

'We've quickly outgrown the factory, and the current facilities do not respond to our rapidly expanding market demands in the region', says **Jonathan Pascoe**, President of Vahterus Americas. We are looking for a new location for US manufacturing while also enlarging the sales team in the region. Please get in touch with our team for open positions.

Established in 1990, Vahterus is a Finnish family business focused on sustainable heat-exchanger solutions. Vahterus is the inventor, pioneer and market leader in Plate & Shell Heat Exchanger technology. With manufacturing facilities in Finland, China and USA, and subsidiaries in the USA, UK, Germany, Sweden and China, we currently employ more than 500 people globally.
